LIGHTNING DIP

**COLD IMMERSION CLEANER FOR DEGREASING AND
DECARBONISING CARBURETORS, PISTONS, DIESEL
INJECTOR ASSEMBLIES AND OTHER ENGINE PARTS.
ALSO AN EFFECTIVE PAINT REMOVER.**

DIRECTIONS

MOMAR LIGHTNING DIP is a *two-phase cleaner*. It has an aqueous seal, containing corrosion inhibitors, which floats on the surface, thus also preventing evaporation of the active solvents in the lower layer. Because of the seal, the entire contents of the container must be poured into a dipping tank. Care must be taken when unscrewing the cap on the drum, as vapour builds up in the container, caused by agitation.

The parts to be cleaned should be immersed in the lower layer of the liquid, until the deposits are removed, or loosened to the extent that they can be rinsed away by pressure spray rinsing with water, or using mineral spirits. For most carbon deposits this can be achieved in 2 to 4 hours, but in severe cases, e.g. on pistons, overnight immersion may be necessary.

Where surface grease and oil are present on components, these should preferably be removed beforehand with a good degreaser such as MOMAR AMMO, or TOP JOB. This will help avoid excessive contamination of the LIGHTNING DIP bath.

CAUTION

Contains non-flammable chlorinated solvents, which are highly volatile. Store in a cool place away from heat. Keep containers closed, or dip tank covered when not in use. Avoid contact with skin or eyes. Use with adequate ventilation and avoid prolonged breathing of vapours.
