

## Description:

IVORY SEIZE NOT Food Grade Anti-Seize is formulated to meet FDA regulation 21CFR 178.3570 for use on equipment in food processing and packaging plants, bottling plants, etc. IVORY SEIZE NOT provides excellent protection against seizing, galling, rusting, and corrosion of threaded parts where incidental food contact is possible. It's excellent resistance to water wash off enables IVORY SEIZE NOT to provide the ultimate protection against metal-to-metal wear on chain drives, conveyor systems, oven bearings, packaging equipment, pump gears, and stainless steel parts and fittings.

## Benefits:

- Prevents metal seizure, galling, rust, and corrosion.
- Wide operating temperature range of -65°F (-54°C) to 1800°F (982°C).
- Exceptional resistance to water washout, due to its Aluminum Complex base.
- Can be used for various applications throughout a food plant because it is tough enough for non-food applications (reduces the possibility of contamination).
- Contains no metal.

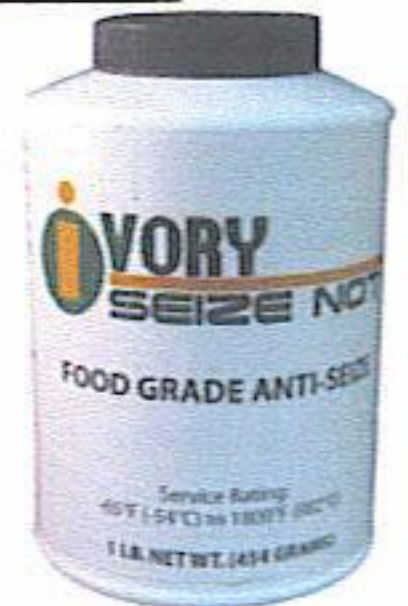

## Can Be Used On:

- |                                       |                                   |
|---------------------------------------|-----------------------------------|
| • <b>Bottling Machinery</b>           | • <b>Nuts, Bolts, Screws</b>      |
| • <b>Pump Gears, Motors</b>           | • <b>Chain Drives</b>             |
| • <b>Packaging Machinery</b>          | • <b>Stainless Steel Fittings</b> |
| • <b>Conveyor &amp; Oven Bearings</b> | • <b>Pipe Fittings</b>            |
| • <b>Valve Assemblies</b>             | • <b>Gaskets</b>                  |
| • <b>Press Fit Assemblies</b>         | • <b>Worm Gears</b>               |

## Application:

Before installing the nut, bolt, screw, or mechanical fastener, thoroughly apply IVORY SEIZE NOT around the threads of the part. Make sure IVORY SEIZE NOT is applied evenly to ensure total coverage.

IMPORTANT: IVORYSEIZE NOT is to be used on mechanical fasteners BEFORE the part has been installed on the machinery. If the part has already been fastened onto the machinery without anti-seize use MOMAR's NUTCRACKER PLUS AEROSOL, a penetrating, rust preventing, water displacing, light-film lubricant.

## Specifications:

Thickener	Aluminum Complex
Color	Off White
Odor	None (Odorless)
Solid Lubricant	PTFE
Temperature Range	-65°F (-54°C) - 1800°F (982°C)
4-Ball (ASTM D-2596)	
Weld Point	400 kgf
Load Wear Index	72
Salt Fog Resistance	+200 Hrs
Copper Corrosion (ASTM-D-4048)	1A
Health/Flammability/Reactivity	0 / 1 / 0
Personal Protection	B- Safety Glasses and Gloves

# IVORY SEIZE NOT

PREMIUM FOOD-GRADE ANTI-SEIZE

## FREQUENTLY ASKED QUESTIONS

**Q: How does Ivory Seize Not work?**

**A:** Like all anti-seize products, Ivory Seize Not works by using a solid lubricant to form a physical barrier between the metal surfaces of the threads. In the case of this product, the solid lubricant is PTFE. To aid in the lubricating process, Ivory Seize Not also contains a blend of white mineral oil and synthetic oils in an Aluminum Complex grease base.

**Q: How does this product compare with other anti-seizes?**

**A:** Nearly all anti-seizes have their places only in industrial plants. Ivory Seize Not is effective up to 1800°F (982°C) while maintaining its food grade status.

**Q: What kind of plants can use Ivory Seize Not?**

**A:** This product can be used in any type of industrial plants. Ivory Seize Not provides food plants with the greatest benefits, but this product is capable of providing protection in many different industrial environments. Perhaps you have a customer that desires a light colored, non-staining anti-seize or one containing no metal. You now have Ivory Seize Not to handle the job.

**Q: Where can Ivory Seize Not be used?**

**A:** While this product was designed to be an anti-seize, it can be used for other applications also. Its adhesive nature allows it to be used in chain drives, sliding and cam applications, and pump gears. It can also be used when assembling machinery to reduce the torque needed to complete the task.
